Project: LC14

Chimenea Creek

Location / Limits: 3300 ft (1km) West of Helotes and Chimenea Creek Confluence at Scenic Loop Road

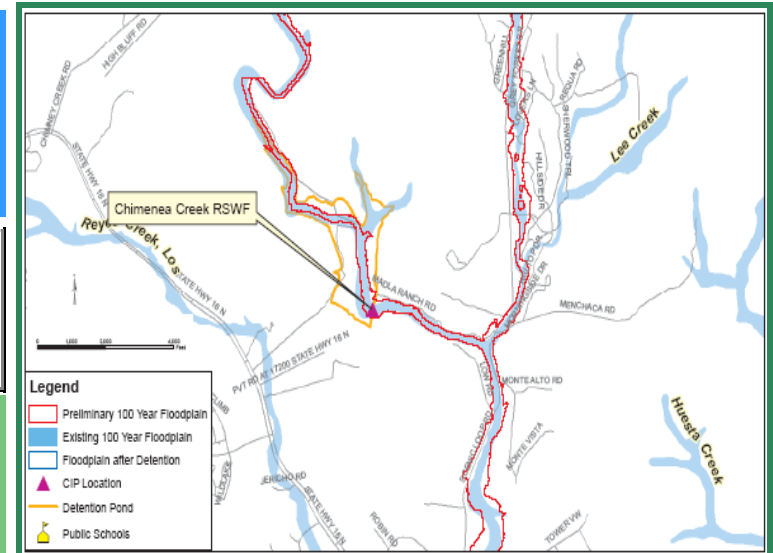

SCOPE :

To study a tributary of Helotes Creek and provide options to reduce flooding along Scenic Loop Road. Options included in the study review the potential of Regional Storm Water Facility, regrading of roadway, and the installation of a High Water Detection System.

Project on hold:

The preliminary engineering report (PER) for this project has been completed. No cost effective regional storm water projects were identified during the PER. Various alternatives of regional detention ponds and channel improvements were reviewed during the PER.

Precinct: 3 **OCL/ICL:** O.C.L.
Watershed: Leon Creek
Creek Name: Chimenea Creek / Helotes Creek
Project Type: Regional Storm Water Detention Facility
